

DON'T TAKE OUR WORD FOR IT —

Read what your peers are saying about the Invertec® V350-PRO!

Two machines from different manufacturers were brought in for a side-by-side comparison. After getting input from instructors and students who used both units, the Center's Director of Training, Steve Lawler, chose the Invertec® V350-PRO from The Lincoln Electric Company.

“Originally we were looking to do 50/50 – half of one brand of machine and half of the other, since this is more representative of what would be seen in the field. But after our people had welded with both, they preferred the Lincoln unit. It was quieter, produced a better arc and had an LED readout, which the welders really liked. In addition, our previous welding units, which lasted us 50 years, were Lincoln Idealarc® models, so we decided to completely outfit our 38-welding station center with new Lincoln units.”

“By switching to the Invertec V350-PRO units, our students are now having an easier time adjusting to what is in the field,” said Lawler. “These units are well-built and are great for the construction site.”

“I would definitely recommend this machine,” noted Lawler. “They have been great assets for us. We now are offering the most up-to-date technology for our students, enabling them to get out in the field and hit the ground running.”
